

HAC 2.0

Scan-Line 900 Series
Icon-Line Moderna

Heta's HAC 2.0 technology can be purchased as an option and is easy to control using Heta's app for Android/iOS via Bluetooth.

HAC 2.0 is, first and foremost, a convenient aid in getting the highest possible heating value out of the firewood and, thus, the best possible value for money compared to manual operation. In addition, HAC 2.0 ensures against user error, as the temperature in the firebox will always be perfect.

An indicator is attached to the stove, which uses colour codes (red, yellow and green) to alert you if reignition is necessary or too much firewood has been loaded. The stove's door is equipped with a door sensor that registers when new firewood is added.
